

SMUGOLOT

Whitepaper

Too Rare To Care.

Built on Solana • Community Powered • Built for Rare Legends

\$SMUGOLOT

Too rare to care.

Executive Summary

SMUGOLOT is a community-driven token built on Solana, designed to blend meme culture, digital identity, and long-term brand growth. The project is structured with a fixed supply, modest trading taxes that support ecosystem sustainability, locked team allocation, and a clear distribution model to support transparency and trust. SMUGOLOT aims to create a recognizable community asset with a strong visual identity and an active holder base.

Vision

The vision of SMUGOLOT is to build a memorable token brand that grows through community energy, creative campaigns, and consistent delivery. Rather than relying on complicated mechanics, the project focuses on clarity, accessibility, and social momentum. The long-term goal is to establish SMUGOLOT as a durable brand within the Solana ecosystem.

Token Details

- Token Name: SMUGOLOT
- Network: Solana
- Total Supply: 100,000,000 Tokens
- Trading Tax: 0.25% Buy Tax & 2% Sell Tax
- Vesting: 6 to 12 months, depending on the allocation category
- Team Allocation: Locked

Token Allocation

CATEGORY	ALLOCATION
Circulating Supply	50%
Liquidity	20%
Team Allocation (Locked)	20%
Marketing / Ecosystem	5%
Community Rewards	5%

Utility

SMUGOLOT is designed as a community and brand token with utility centered on participation and engagement. Utility includes community reward campaigns, access to exclusive announcements, partnerships with Solana-native projects, and ongoing community programs. The roadmap also introduces loyalty-style rewards, quests, branded drops, and community-led initiatives as the project matures.

Presale

SMUGOLOT's public presale runs on PinkSale, offering 50,000,000 \$SMG (50% of total supply). The presale rate is 1 SOL = 50,000 SMG, approximately \$0.0013 per token at current SOL prices. SoftCap is 250 SOL and HardCap is 1,000 SOL, with a minimum buy of 0.76 SOL and maximum buy of 30 SOL per wallet. Contributions are capped per wallet to support fair distribution. Funds raised are paired into the Raydium liquidity pool at launch, with LP tokens locked via PinkLock for transparency and security.

Roadmap

Phase 1: Launch Foundation

Finalize branding, deploy the token, establish liquidity, and activate the community channels.

Phase 2: Community Growth

Run meme campaigns, raids, ambassador programs, partnerships, and reward initiatives.

Phase 3: Ecosystem Expansion

Introduce gamified events, exclusive community access, and possible collectible or loyalty integrations. Phase 3 will also include the official launch of \$SMG staking — allowing holders to lock their tokens in flexible or fixed staking pools and earn rewards from the community allocation. The staking contract will undergo a full audit before launch to ensure security and transparency.

Phase 4: Long-Term Brand

Strengthen holder retention, expand collaborations, and develop recurring utility for the community.

Staking

SMUGOLOT will introduce a staking program in Phase 3 of the roadmap, allowing holders to lock their \$SMG tokens and earn rewards over time. Staking is designed to incentivize long-term holding, reduce circulating supply pressure, and reward the most committed members of the community.

Staking Options

- Flexible Staking — Stake and unstake anytime with standard reward rate.
- Fixed Staking (30/60/90 days) — Lock tokens for a set period and earn a higher APY.
- Rewards are distributed from the Community Rewards allocation (5% of total supply).
- Staking contract will be fully audited before launch.
- Staking dashboard will be accessible via the official SMUGOLOT platform.

Security & Audits

Transparency and security are core to SMUGOLOT's design. The project's contract and on-chain activity are verifiable via Solana Explorer, with mint, freeze, and update authorities fully revoked at launch. A FreshCoins audit widget is embedded directly on the official website for real-time verification by holders and prospective buyers. Cyberscope serves as the project's preferred audit and KYC partner, and any future smart contracts — including the Phase 3 staking contract — will undergo a full third-party audit before launch.

Marketing Strategy

SMUGOLOT marketing focuses on community-first growth, meme culture, and Solana ecosystem visibility. Campaigns may include social raids, content contests, influencer collaborations, holder challenges, and branded events. Messaging emphasizes speed, simplicity, transparency, and the project's rare identity.

Marketing Claims

- Built on Solana for fast and low-cost transactions.
- Community-powered from day one.
- Designed for meme culture and long-term brand growth.
- Modest 0.25% buy / 2% sell tax supporting liquidity and community rewards.
- Locked team allocation to support transparency.
- Structured vesting to reduce early market pressure.
- Focused on rarity, creativity, and community identity.

Risk Factors

SMUGOLOT involves risks common to digital assets and meme tokens. These include market volatility, liquidity risk, execution risk, community dependence, concentration risk, smart contract risk, regulatory risk, and hype fatigue. Token value may rise or fall quickly, and roadmap delivery depends on the team, market conditions, and community engagement.

Conclusion

SMUGOLOT aims to combine a clean Solana-based token structure with a strong community identity and a memorable brand. With a fixed supply of 100 million tokens, locked team holdings, a modest tax structure, and a structured allocation model, the project is designed to support transparency and community engagement. Long-term success depends on sustained development, consistent communication, and an active holder base.
